Summary

Computer Science student with strong problem-solving skills and a solid foundation in Data Structures and Algorithms. Solved 940+ problems on LeetCode with a rating of around 1806. Proficient in Java and experienced in building projects using modern web technologies. Seeking an opportunity to apply technical skills and grow as a software developer.

Projects

Job Quest (Python, NLP libraries)

- Developed an ATS score analyzer that compares resumes with job descriptions using NLP techniques and tokenization.
- Implemented text processing and similarity matching using Python and spaCy to calculate resume ATS compatibility score.
- Built a course recommendation feature to suggest relevant courses for improving resume quality and ATS score.
- Collaborated in a team to design and develop the system, contributing to backend logic and frontend integration using AJAX.

Shortly (HTML, CSS, javascript)

- a web application that converts long URLs into short, easy-to-share links.
- Generates unique shortened URLs for quick redirection to original links. Improves usability by making links more readable and manageable.
- Provides fast and efficient URL mapping and redirection system. Designed with a simple and user-friendly interface for smooth user experience.
- Implemented using Node.js and Express for backend logic.
